## Biography Highlights

- Jay Tuck, bestselling author, television producer and investigative journalist, is one of the world's most visionary speakers. Amidst our changing times, he has specialized in the ground-breaking world of artificial intelligence. With decades of experience in IT and television journalism he can be an exciting addition to your event!

## Biography

### Meet Jay Tuck

The New York born journalist Jay Tuck launched his career with the US Department of the Treasury in Washington DC and CBS News in New York. He later moved on to a distinguished career in international news. In Germany, he produced over 500 investigative segments for network television, including NDR-Panorama and WDR-Monitor. He served as combat correspondent on the battlefields of Kuwait, Iraq and Ukraine, as well as on aircraft carrier USS Truman in wartime. He has military clearances in eight countries. Jay Tuck writes for Focus, Le Point, Stern, Welt, Time Magazine and Die Zeit. He was employed for many years as Executive News Director at ARD and has significant expertise in defense, espionage and weapons technology.

He is author of acclaimed books on defense. His investigative book on

Russian espionage, High-Tech Espionage (St. Martin's Press, New York) was published in fourteen countries. His book on artificial intelligence, Evolution Without Us (Plassen Publishing) is a best-seller in Germany, also published in China. The German Ministry of Defense purchased 10,000 copies for distribution to their armed forces. His current work, "AI and Modern Warfare," (Econ Publishing) examines battlefield experience with AI in the Ukraine War.

Jay Tuck is also an internationally acclaimed speaker on artificial intelligence. He is booked regularly by private banks and financial institutions, media and medical events, law enforcement and armed forces, such as the Officers Academy of the German Army in Hamburg or the World Bank. His TED-Talk on artificial intelligence reached more than five million views in the internet.

In his recreational time, Tuck is a runner. He was the first American ever to complete the Siberian Ice Marathon in Omsk.

### Testimonials

“

Extremely entertaining, extremely competent.

*Hamburg@Work*

“

Be prepared for shocking surprises on humanity's chances in the age of AI.

*High-Tech Presse Club*

“

Humor did not come up short. Feedback from our investors was very, very good.

*Aramea Asset Management*

“

Jay Tuck is among the top tier of internationally recognized keynote speakers.

*Alster Business Club*

“

It will take AI a long time to replace an inspirational speaker like this.

*Viactive Health Insurance*

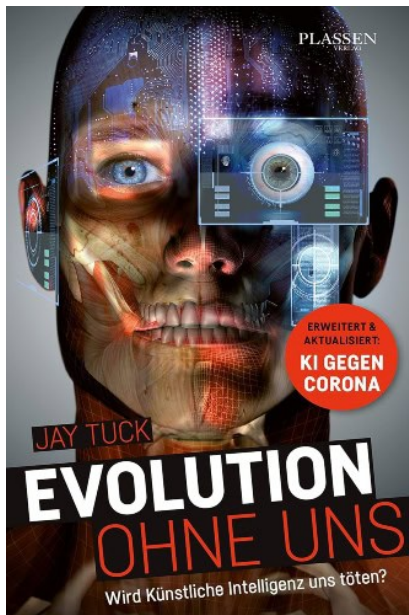

### Books

## KI und der moderne Krieg

The war in Ukraine sets new standards in military confrontation. Smart weapons, intelligent missile defense systems, portable and infrared-guided anti-tank missiles, satellite information, location detection of soldiers' cell phones, or drones decide between life or death, victory or defeat. The experienced war reporter and defense expert Jay Tuck writes about his personal experiences in Ukraine and his previous deployments in Iraq, comparing the functionality of various weapons systems and strategies and measuring their effectiveness against the brutal reality of the battlefield. The images we see do not reflect the crucial role of information, disinformation, digital infrastructure, smart weapons systems, technological superiority, and artificial intelligence in determining the outcome of the war. Jay Tuck explains exactly this for us.

## Evolution ohne uns: Wird Künstliche Intelligenz uns töten?

Every day, we entrust intelligent programs with more and more responsibilities for urban planning and energy supply, for securing food supply and natural resources. But what happens if we create an intelligent being that is far superior to humans? In pursuing pre-programmed goals, a computer intelligence might see humans as an obstacle—and act accordingly... Today, artificial intelligence makes our lives easier. But in just a few years, it will control large parts of our lives—and have the power to destroy us. Jay Tuck delves into this exciting topic and presents an updated and expanded paperback edition of his bestseller. A wake-up call for everyone who underestimates the dangers of artificial intelligence!

## High-Tech Espionage

A French counter-spy penetrates the inner circles of a Soviet espionage ring - and is found dead on a deserted road in the Alps; an eccentric California inventor launches a high-tech enterprise from his garage - and sells one of America's best-kept secrets to Soviet spies. The theft of NATO technology is their number one priority - more important than political or military espionage - and their stunning success threatens the very foundation of western defense. Hamburg-based American journalist Jay Tuck has traced the cloak-and-dagger tale of computer espionage across the American and European continents, interviewing eye-witnesses, military experts, even some of the smugglers. His authentic account is an East-West thriller that for the first time throws light into the murky world of microseconds and megadollars where embargo-runners pursue their dark trade.
